SUMMARY

Full Stack Developer with 5+ years building production SaaS and fintech platforms using React, Next.js, Node.js and TypeScript. Experienced in scalable backend architecture, AWS, Docker/Kubernetes and microservices, with recent hands-on work building RAG and LLM-powered applications with Python.

SKILLS

- **Frontend:** Next.js (App Router, SSR), React, Vue.js, TypeScript, JavaScript, Tailwind CSS
- **Backend:** Node.js, Express.js, REST APIs, OpenAPI and Swagger, microservices, gRPC, WebSockets, JWT Authentication, Stripe
- **AI and LLM:** Python, FastAPI, RAG pipelines, LangChain, embeddings, semantic search, pgvector, prompt engineering, function calling, streaming, OpenAI, Claude, Gemini and Groq APIs
- **Databases:** PostgreSQL, MongoDB, Redis, Prisma
- **Testing:** Jest, unit and integration testing
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Linux

PROFESSIONAL EXPERIENCE

Software Engineer | **Programmers Force**

Mar 2024 - May 2026

- Built the authentication and role based access control layer for shuftipro.com, an enterprise identity verification SaaS supporting 1,000 concurrent users, using Node.js, Express and JWT.
- Cut average page load time by 40% across production apps via backend query tuning and frontend bundle optimization.
- Delivered production features across six client projects, owning API design through frontend release on each.
- Built a fintech lending platform end to end, integrating Stripe Connect for lender onboarding, payment flows and automated payouts.

Software Engineer | **Finz Games**

May 2021 - Feb 2024

- Built the entity screening dashboards for AML Watcher and Media Watcher across frontend and backend, integrating third party data provider APIs so one search returns aggregated sanctions, PEP and adverse media matches from multiple databases across 100,000 global sources.
- Built and maintained REST APIs across three web applications, owning backend architecture, database design and third party integrations from concept to production.
- Reduced runtime memory overhead by 25% through performance profiling and targeted optimization of Node.js backend services.
- Cut average production issue resolution time by 60% by standardizing error handling and debugging workflows.

PROJECTS

Connect Wheels

Social car platform with garage profiles, listings and real time chat. Built on microservices with an API Gateway, gRPC service to service communication, JWT auth and WebSocket messaging.

Tech Stack: Node.js, TypeScript, Express, gRPC, Socket.IO, MongoDB, PostgreSQL, React

AI Job Copilot

RAG based job matching tool that embeds resumes and job descriptions into a vector store and returns match scoring with tailored application drafts. Built the retrieval pipeline end to end covering chunking, embedding, relevance ranking and grounded generation.

Tech Stack: Next.js, TypeScript, Python, FastAPI, LangChain, Supabase pgvector, Groq

EDUCATION

BS Computer Science | **University of Management and Technology, Lahore**

Dec 2018 - Dec 2022

CGPA 3.81 | Silver Medalist
